EXAMINER

HARVEY, JAMES R

ART UNIT

PAPER NUMBER

2833

DATE MAILED: 11/07/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/822,572	Applicant(s) LLOYD ET AL. 	
	Examiner James R. Harvey	Art Unit 2833	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 August 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3-11 and 13--19 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-11 and 13--19 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 12 April 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Cancellations

The cancellations of claims 2 and 12 is made of record.

Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

** Claim(s) 1, 3-11 and 13-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hornchek et al. (US 6541991) in view of Higashi (US Pub. 2004/0166702).

-- In reference to Claim(s) 1, Hornchek shows (cover sheet)

an upper surface 372 with a plurality of solder ball receiving apertures 376 formed therein; and

a spring contacts 320 (column 4, line 50 and figure 8 of US Patent 5955888) contact arranged in the apertures to electrically engage a solder ball 126B (figure 6c) inserted into the aperture.

However, Hornchek does not show that the spring contacts are S-shaped.

Higashi shows spring contacts 20 (see examiner's figure) are S-shaped and the combination of Hornchek and Higashi is considered to be adapted to make wiping electrical contact with a solder ball inserted into the aperture (see examiner's figure).

Art Unit: 2833

It would have been obvious to one of ordinary skill in the art at the time the invention was made to choose the shape spring contact to be an S-shape, since applicant has not presented any explanation that this particular shape is anything more than one of numerous configurations a person of ordinary skill in the art would find obvious for the purpose of providing a mating surface between two parts. A change in shape is generally recognized as being within the level of ordinary skill in the art. In re Dailey, 149 USPQ 47 (CCPA 1976).

Further, it would have been obvious to one of ordinary skill in the art at the time the invention was made to replace the mounting plate 350 with spring contacts 320 of Hornchek with the mounting plate 10 with the S-shaped spring contact 20 Higashi (see examiner's figure).

One skilled in the art would have been motivated to replace the mounting plate and spring contacts because the spring contacts of Higashi have less components thereby making them easier and less expensive to manufacture.

Art Unit: 2833

-- In reference to Claim(s) 11, Hornchek shows (cover sheet)

a printed circuit board 310;

a socket 300 coupled to the printed circuit board,

Art Unit: 2833

the socket including a housing 370 having an upper surface 372 with a plurality of solder ball receiving apertures 376 formed ;

a spring contacts 320 (column 4, line 50 and figure 8 of US Patent 5955888) contact arranged in the apertures to electrically engage a solder ball 126B (figure 6c) inserted into the aperture.

However, Hornchek does not show that the spring contacts are S-shaped.

Higashi shows spring contacts 20 (see examiner's figure) are S-shaped and the combination of Hornchek and Higashi is considered to be adapted to make wiping electrical contact with a solder ball inserted into the aperture (see examiner's figure).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to choose the shape spring contact to be an S-shape, since applicant has not presented any explanation that this particular shape is anything more than one of numerous configurations a person of ordinary skill in the art would find obvious for the purpose of providing a mating surface between two parts. A change in shape is generally recognized as being within the level of ordinary skill in the art. In re Dailey, 149 USPQ 47 (CCPA 1976).

Further, it would have been obvious to one of ordinary skill in the art at the time the invention was made to replace the mounting plate 350 with spring contacts 320 of Hornchek with the mounting plate 10 with the S-shaped spring contact 20 Higashi (see examiner's figure).

One skilled in the art would have been motivated to replace the mounting plate and spring contacts because the spring contacts of Higashi have less components thereby making them easier and less expensive to manufacture.

-- In reference to Claim(s) 3, Higashi shows (figure 5) the spring contacts are adapted to make wiping electrical contact with lands (claim 3).

In particular reference to the recitation “adapted to” is seen to be for the intended use of the claimed structure and is given little patentable weight, since it has been held a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). Further, the claim language is not seen to claim any structure that would inhibit the reference from being used for the same purpose as the intended use recitations of the claim.

-- In reference to Claim(s) 4 and 13, Hornchek as modified by Higashi shows the S-shaped spring contacts include opposed contact arms (the top and bottom distal ends; Higashi (cover sheet)), one of which extends upwardly and the other which extends downwardly.

-- In reference to Claim(s) 5, Hornchek as modified by Higashi shows (cover sheet of Hornchek) the socket includes a body 370, the body having a plurality of solder ball receiving apertures 376 formed therein.

-- In reference to Claim(s) 6, Hornchek as modified by Higashi (cover sheet) shows an alignment (380; Hornchek) feature extending upwardly from the body 370.

In particular reference to the recitation “to align a land grid array package with the socket” is seen to be for the intended use of the claimed structure and is given little patentable weight, since it has been held a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art

Art Unit: 2833

apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). Further, the claim language is not seen to claim any structure that would inhibit the reference from being used for the same purpose as the intended use recitations of the claim.

-- In reference to Claim(s) 7, Hornchek as modified by Higashi shows (figure 6; Higashi) the spring contacts include an upwardly extending arm to make contact with an integrated circuit package 50 and a downwardly extending arm to make contact with an underlying circuit board 30.

-- In reference to Claim(s) 8, Hornchek as modified by Higashi shows the socket includes a body (370; Hornchek) including an upwardly extending protrusion 347.

However, Hornchek does not show the protrusion 347 having a height less than the height of a solder ball 126B (figure 6c) for a ball grid array package.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to reduce the size of the height of Hornchek protrusion 347, since such a modification would have involved a mere change in the size or shape of a component. A change in size or shape is generally recognized as being within the level of ordinary skill in the art. *In re Daily*, 149 USPQ 47 (CCPA 1976). One skilled in the art would have been motivated to reduce the size of the protrusion 347 of Hornchek in order to reduce the amount of material used and thus reduce the overall cost of the assembly.

-- In reference to Claim(s) 9, Hornchek (figure 4) shows the alignment feature 380 is L-shaped.

-- In reference to Claim(s) 10, Hornchek (figure 4) shows two L-shaped alignment features opposed diagonally from one another on the socket.

Art Unit: 2833

-- In reference to Claim(s) 13, Hornchek as modified by Higashi shows the same structure as address with claim 4.

-- In reference to Claim(s) 14, Hornchek as modified by Higashi shows (figure 6; Hornchek) the printed circuit board 310 has lands (column 6, line 52; Hornchek) engaged by the spring contacts. The meaning of "lands" is not set forth in the claims and is thus deemed to be so broad that it is met by the applied reference showing traces (column 6, line 52 of Hornchek).

-- In reference to Claim(s) 15, Hornchek shows (cover sheet) the housing 370 includes a protrusion 380 on its upper surface.

In particular reference to the recitation "to align a land grid array package with the housing" is seen to be for the intended use of the claimed structure and is given little patentable weight, since it has been held a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987). Further, the claim language is not seen to claim any structure that would inhibit the reference from being used for the same purpose as the intended use recitations of the claim.

-- In reference to Claim(s) 16, Hornchek shows (figure 4) the alignment protrusion is L-shaped.

-- In reference to Claim(s) 17, Hornchek shows (figure 4) two L-shaped alignment protrusion opposed diagonally from one another on the housing.

-- In reference to Claim(s) 18 and 19, Hornchek teaches (column 4, line 50) a ball grid array package or a land grid array package engaged on the socket housing (5955888; (column 9, lines 4-7).

Response to Amendment

-- In response to applicant's remark (page 5, line 15) that the decision cited in the office action did not address a claim including "adapted to" does not convince the examiner that the amended claims are allowable over the cited references of Hornchek and Higashi. The examiner is not convinced because Higashi shows an S-shaped contact (cover sheet) and teaches that it is for wiping or rubbing with a solder ball (Higashi, paragraph 0002, line 7).

-- In response to applicant's response (page 5, line 16) that wiping has a special meaning, the examiner disagrees because a review of applicant disclosure (also see US Publication 20050227509 of applicant's disclosure) does not show any special definition requiring a narrowing of the meaning of wiping. Further, applicant's figure 1 shows a contact adjacent the solder ball that is not seen to differentiate between the structure of Higashi (figure 5) that also shows a contact adjacent the solder ball.

Conclusion

- Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2833

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

- Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Harvey whose telephone number is 571-272-2007. The examiner can normally be reached on 8:00 A.M. To 5:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on 571-272-2800 extension 33.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 571-272-2800.

- Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
